

AVERO RIGHT NOW

CASE STUDY: SETTING ACTIONABLE GOALS IN REAL TIME

+\$197,000

Increase in Annual Revenue

Salvation Taco

THE CHALLENGE

In the beginning of 2016, Salvation Taco General Manager Mariana Ross was looking for a fun and engaging way to drive average check at her restaurant. Mariana turned to Avero, the leading provider of restaurant software analytics, and their new mobile app to help her achieve this goal in real time.

THE SOLUTION

With the help of Avero's real-time mobile application, Mariana is able to set daily goals for her team to encourage sales of signature items. She motivates her team to push a few extra menu items per cover, and uses Avero Right Now to track the success of these sales in real time. Mariana is able to track how many of each item a server sells and then compare their nightly sales to their historical averages in Avero.

THE RESULTS

Mariana finds these daily goals to be great team-building exercises and fun ways to boost average check, while setting attainable goals in real time. With 9 servers per shift over 3 shifts, Mariana has seen her servers each make an additional \$60 per day, leading to an annual increase of \$197,000+ in revenue!

“Setting revenue goals through the Avero Mobile app for my team to push those two extra margaritas or taco trios is a fantastic teambuilding exercise. We've seen it generate as much as \$150 of revenue within minutes!”
